THAT GENRE API APP

This app is based around the cinephile user. With 'That Genre' anyone can access film knowledge from their finger tips.

The user will simply type their favorite film genre into the search bar on our home page to retrieve an array of film titles in that genre.

Once the user has searched a genre, a second page will then load revealing movie cards in stacked columns and rows (single for mobile)

Each movie card will list information pertaining to the film including "Year", "Rating", "Director", "Genre" and "Run-Time".

STRETCH GOALS

- Hamburger menu for social links
- Create filters on homepage
- Add images for movies
- On click the images -> film info pages
